

AMENDMENTS TO THE ABSTRACT

Please replace the abstract with the following new abstract:

-- A plurality of flexible printed circuit boards are held on a transfer carrier, which is formed by a base plate and a resin layer formed on an upper surface of the base plate. Reference pins are positioned at reference pin openings of the carrier base plate and reference holes of the flexible printed circuit boards are positioned at the reference pins in order to adhere the board to the carrier resin layer. Electronic parts are mounted on the flexible printed circuit board by bonding the electronic parts to bonding portions of the flexible printed circuit board. --
